ENTRY 003

What we believe.

Before a wordmark or a color, a brand is a position. This section defines why Tracck exists, who it serves, and the conviction that makes every later design decision inevitable rather than arbitrary.

01 — MISSION

What we do, stated plainly.

Turn the work people already do in public into proof they can put on paper.

Tracck reads the public record — commits, shipped features, talks, posts, files — and converts it into resume bullets a hiring manager will actually read. Nothing invented. Nothing embellished. Just translated.

02 — VISION

The world we're building toward.

A future where no capable person is overlooked for want of a well-written sentence.

Talent is distributed evenly. Access to resume-writing conventions is not. We want Tracck to close that gap first for Nigeria's builders, then for every market where public work outpaces private paperwork.

02 — POSITIONING STATEMENT

Where Tracck sits, and where it refuses to.

For early-career technical and creative talent in Nigeria, Tracck is the record-keeping layer between public work and the job application — unlike generic resume builders, which start from a blank page, Tracck starts from evidence you already produced.

WHAT WE ARE NOT

- ✗ A generic AI resume generator that writes fiction from a prompt.
- ✗ A template marketplace. Formatting is not the hard problem we solve.
- ✗ A social network. We read public activity; we don't ask you to create more of it.

WHAT WE ARE

- ✓ An extraction and translation engine — evidence in, resume bullet out.
- ✓ A standing ledger of accomplishment, updated automatically as you work.
- ✓ Built first for the Nigerian tech and creative talent market, specifically.

03 — CORE VALUES

Four convictions that shape every decision.

01

Evidence over embellishment

We rewrite for clarity, never for exaggeration. If a claim can't be traced to a real, dated action, it doesn't ship.

02

Quiet confidence

The work speaks. We don't need exclamation points, gradients, or hype to say something true.

03

Built for where talent actually is

Designed for Nigerian bandwidth, Nigerian hiring norms, and the specific gap between GitHub activity and a CV that clears an ATS.

04

The user keeps the pen

Every AI-drafted bullet is a suggestion awaiting confirmation. Nothing publishes to a resume without a human saying yes.

04 — BRAND PERSONALITY

If Tracck were a person in the room.

The senior engineer who reviews your PR without ego, tells you exactly what's good, and never pads the feedback with filler.

WE ARE

Precise

not clinical

Direct

not blunt

Calm

not passive

Earned

not boastful

WE ARE NOT

Hyped

reads as insecure

Corporate

reads as distant

Playful-first

undermines the stakes

Loud

the evidence should be loud, not us

05 — BRAND PROMISE

Every win you've shipped, ready the moment you need it.

Not "we'll help you find a job." A narrower, keepable promise: your public work, always in a state ready to hand to a recruiter — no scrambling, no forgetting what you built in March.

06 — BRAND STORY

Tracck started from a specific, common failure: a student ships a working product for a hackathon, writes three technical blog posts, ships a dozen meaningful commits — and then sits down to write a resume and produces four generic bullet points, because nobody taught them the translation layer between "what I did" and "what a recruiter needs to read."

That gap isn't a writing-skill problem. It's a record-keeping problem — the work is scattered across four platforms and nobody's job to compile it. Tracck exists to be that job: watching quietly, extracting what matters, and keeping it ready.

ENTRY 009

The mark.

A symbol built from the same logic as the product: entries, in order, confirmed. Not a decoration — a construction.

CONSTRUCTION LOGIC

Three ascending entries on a single baseline.

Built on a 44-unit module grid. Every bar, gap, and the baseline itself resolve to whole modules — nothing is eyeballed. The mark reads two ways at once: a bar chart of growth, and tally marks in a logbook. Both readings are true to the product.

- MODULE — 44 UNITS
- STROKE — 1 MODULE
- GAP — 0.5 MODULE
- ACCENT — FINAL BAR ONLY

PRIMARY LOCKUP

USE — PRODUCT UI, WEBSITE HEADER, PRIMARY BRANDING SURFACES

SECONDARY — STACKED

USE — SQUARE FORMATS, SOCIAL AVATARS, APP SPLASH

SYMBOL ONLY

USE — FAVICON, APP ICON, WHEN WORDMARK IS ESTABLISHED NEARBY

CLEAR SPACE

Give the mark room to breathe.

Minimum clear space equals the height of one bar-gap module (0.5×) measured from the tallest point of the mark, applied on all sides. No text, edge, or competing element enters this zone.

MINIMUM SIZE

Below these sizes, legibility fails.

The symbol's four bars must remain visually distinct. Tested and confirmed legible down to 16px digital / 6mm print. The wordmark lockup should not run narrower than 120px digital / 20mm print.

DON'T

Six ways to break the mark.

Don't rotate the mark

Don't distort proportions

Don't recolor individual bars

Don't place on gradients

Don't add drop shadows or bevels

Don't substitute the wordmark typeface

ENTRY 014

Paper and ink.

One color does real work. Everything else is paper, ink, and the quiet
grays between them.

PRIMARY PALETTE

Paper #F7F5F0 Primary ground. 70% of any layout.	Ink #141310 Primary type & mark color.	Signal #1F6F4A Confirmation only. Never decorative.
--	--	---

SECONDARY & NEUTRAL PALETTE

Paper Warm #F1EEE6	Neutral #8A8371	Hairline #D6D0C4	Clay #C4432E
--	---	--	--

Clay is reserved for error states, "don't" annotations, and destructive actions — never for brand expression or emphasis. It is a warning color, not a personality color.

CONTRAST

Every pairing meets WCAG AA at minimum.			
Ink on Paper	16.1 : 1	AAA	
Paper on Ink	16.1 : 1	AAA	
Paper on Signal	4.9 : 1	AA	
Neutral on Paper	3.1 : 1	LARGE TEXT ONLY	
Ink on Paper Warm	15.2 : 1	AAA	

USAGE RATIO

A page is mostly paper.

Signal green should never exceed roughly 5% of any composition. It marks a single confirmed thing — a verified bullet, a completed sync, a successful export. If everything is green, nothing is confirmed.

ENTRY 017

Three voices, one record.

A claim, an explanation, and evidence. Each gets its own typeface, because they are not the same kind of sentence.

THE CLAIM

Fraunces
Display serif

Your wins.

THE EXPLANATION

Archivo
Grotesk, body & UI

Built to help early-career talent turn public work into a resume that actually gets read.

THE EVIDENCE

JetBrains Mono
Utility, data, timestamps

2026.07.12 — 14 commits, feature/auth-flow

Fraunces carries editorial weight and warmth without tipping into decorative — used at large sizes only, always at 700+ weight. Archivo is the workhorse: every UI label, every paragraph, every button. JetBrains Mono appears only where something is literally data — never as a stylistic flourish.

PAIRING IN PRACTICE

ENTRY 042 — 2026.03.11

Shipped auth flow

Implemented Supabase SSR authentication across sign-up, login, and session middleware for the Tracck platform.

This is the pattern: mono stamp, serif claim, grotesk detail — in that order, every time.

WEB-SAFE FALLBACKS

Fraunces → Georgia, serif

Archivo → Helvetica Neue, Arial, sans-serif

JetBrains Mono → SFMono-Regular, Consolas, monospace

For system contexts where webfonts can't load — transactional email, some CMS previews — fallbacks preserve the serif/grotesk/mono role structure even when the specific faces are unavailable.

ENTRY 021

The rules underneath.

Grid, spacing, and components — the invisible structure that makes every screen feel like it belongs to the same product.

SPACING SCALE

4px base unit, geometric progression.

LAYOUT GRID

12-column, 32px gutter.

Margins scale with breakpoint: 24px mobile, 48px tablet, 140px desktop editorial layouts (as used throughout this document).

BORDER RADIUS

Sharp corners, almost everywhere.

The mark is built from square corners — the product inherits that discipline. Radius is used sparingly, only where a control needs to signal "tappable" (buttons, chips), never on structural containers like cards or panels.

0 — CARDS, PANELS

2PX — INPUTS, TAGS

4PX — BUTTONS

ELEVATION

Borders instead of shadows.

No drop shadows anywhere in the system. Hierarchy is expressed through hairline borders, background shifts (paper → paper-warm), and spacing — the ledger-book language of rules, not the screen-language of floating cards.

TAGS & STATUS

Draft

Confirmed

Needs review

Synced

ACCOMPLISHMENT CARD

The core recurring unit of the product — a single extracted accomplishment awaiting or receiving confirmation.

GITHUB — 2026.03.11

Draft

Implemented SSR authentication flow
14 commits across auth, middleware, session handling.

Confirm

Edit

FIGMA — 2026.02.28

Confirmed

Designed component library for BrandBuild
32 components, full design token system.

✓ Added to resume — 2026.02.28

LAYOUT PRINCIPLE

Cards carry a mono metadata line first (the evidence), a serif claim second (the headline), and a grotesk detail last (the explanation) — the same three-voice hierarchy used throughout this document, applied to product UI.

ICON SYSTEM

Single-weight strokes,
square terminals, no fill.

Icons follow the mark's own construction logic: 2px stroke at 24px base size, square line caps and joins, built on the same module discipline. No filled icons, no duotone, no illustrative detail — icons label, they don't decorate.

 github	 external	 confirm	 date	 document	 dismiss
---	---	--	---	---	--

DIRECTION

Real people, real screens. No stock-photo gloss.

Where photography appears — testimonials, about pages, social — it should show real Nigerian tech talent in real working contexts: a laptop at a co-working desk, a phone in transit, a hackathon table. Natural light, unposed expressions, no generic "diverse team high-fiving" stock imagery. No illustration system, no abstract 3D renders, no AI-generated people.

DO

- Natural, available light
- Real screens showing real product or code
- Candid, mid-task moments
- Environments specific to Nigerian tech/student life

DON'T

- Staged corporate stock photography
- AI-generated portraits or scenes
- Generic "collaborative team" clichés
- Heavy filters, gradients, or color grading

PRINCIPLE

Motion confirms. It doesn't perform.

Every animation in the product should answer "did that work?" — nothing plays for delight alone. Duration and easing borrow from the ledger metaphor: entries settle into place, they don't bounce or spring.

Confirm action	180ms · ease-out	Bar fills solid, no bounce
Card entry	220ms · ease-out	Fade + 8px rise, once
Page transition	240ms · ease-in-out	Cross-fade only, no slides
Sync in progress	continuous	Mono counter ticking, no spinner
Error / dismiss	140ms · ease-in	Fade out, no shake

ENTRY 029

How we sound.

Voice, applied — across the product, social, and every surface where
Tracck speaks for itself.

VOICE PRINCIPLES

State the fact, skip the hype

- × "You're crushing it! 🔥 Amazing work this week!"
- ✓ "3 new accomplishments extracted this week."

Name what happened, not what it means

- × "This will make recruiters obsessed with you."
- ✓ "This bullet is ready to add to your resume."

Errors explain, never apologize
performatively

- × "Oops! Something went wrong on our end, so sorry!"
- ✓ "GitHub sync failed. Reconnect your account to retry."

TONE BY CONTEXT

PRODUCT UI

Plain, direct, zero exclamation points

MARKETING

Confident, specific, evidence-led

EMAIL

Warm but brief, one clear action

SOCIAL

Slightly looser, still no hype-speak

TEMPLATE LOGIC

Every post follows the ledger-entry format.

ENTRY 118 — 2026.07.09

**1,200 accomplishments
extracted this month.**

Milestone post — square format

ENTRY 119 — 2026.07.10

**Your GitHub commits
are a resume. We just
read them.**

Product explainer — square format

ENTRY 120 — 2026.07.11

**"I forgot I built that." —
every Tracck user,
eventually.**

User-truth post — square format

WEBSITE

Editorial, not app-marketing.

The marketing site reads more like this document than like a SaaS landing page: generous margins, real typographic hierarchy, mono metadata stamps on section entries, minimal iconography. No hero gradient, no floating dashboard mockup with fake shadows.

MAX WIDTH — 1200PX EDITORIAL COLUMN

HERO — TYPE-LED, NO ABSTRACT GRAPHIC

NAV — MONO LABELS, UPPERCASE

MOBILE APPLICATION

Same discipline, denser rhythm.

On mobile, the accomplishment feed is the primary surface. Cards stack full-width, the mono timestamp stays present on every card, and the confirm action is always a single thumb-reachable tap — never a swipe-to-reveal pattern that hides the action.

BASE SPACING — 16PX MOBILE MARGIN

CARD RADIUS — 0PX (CONSISTENT WITH DESKTOP)

TAP TARGET — 44PX MINIMUM

STATIONERY & PRESENTATION

OWNERSHIP & UPDATES

This is a living record, not a fixed decree.

MAINTAINED BY

Karma Groups holds final authority on brand decisions for Tracck. Any deviation from this system for a specific execution should be justified against the strategy in Part One before it's approved.

VERSIONING

Each revision gets a new entry number and version tag, following the same ledger logic as the product itself. Nothing is silently changed — every update to this document is itself a dated, confirmed entry.

DOCUMENT HISTORY

v1.0 — 2026.07.12 — Initial release
